ADVANCE METEOROLOGIC, ARCHAELOGIC RESEARCH MAKE VILLLAGE NAME CHANGE

OPEN METEOROLOGICAL OBSERVATORY -- Ljubljana, Slovenski Porocevalec, 4 Aug 51; Zagreb, Borba, 13 Sep 51

The newly built meteorological observatory on Bjelasnica Mountain, built on the site of the former observatory which was destroyed during the war, was opened on 9 September 1951. It is equipped with the most modern meteorological instruments and will have radio broadcasting equipment. Three permanent observation posts will give weather reports at least once every 3 hours.

Built of stone almost one meter thick, the observatory has special, insulated rooms for protection against humidity and winds. It also has separate rooms for research and study and a room containing 20 beds for use by members of the Mountain Climbing Association of Bosnia-Herzegovina.

The construction of another observatory on Triglav Mountain has not materialized, but a meteorological station will be built on Kredarica Mountain by fall. It will be turned over to the Bjelasnica Observatory.

EXPLORE KORCULA ISLAND -- Zagreb, Vjesnik, 14 Sep 51

Korcula, 13 September -- An expedition from the Yugoslav Academy of Arts and Sciences in Zagreb, under the leadership of Prof Grga Novak, has landed on Korcula to do archaelogical exploring on the island. The expedition consists of 13 members, among whom are several noted scientists, who are to do research on the prehistoric and Graeco-Roman periods in Korculan history.

Professor Dector Karsulin, member of the Yugoslav Academy of Arts and Sciences, is examining the chemical composition of the soil in an attempt to discover the composition of ceramics already found on the island, with the thought of possible application of this discovery to present-day ceramics manufacture.
